On the 4th of July 1979, I was at Masman High School in the playground and I fell over and hurt my coccyx bone while rumbling with my friends.

After school my grandmother took me to Royal North Shore Hospital, because I was still in pain from my fall. When we arrived we checked in at the counter and were seated. After a short time we were called by the nurse to see the doctor. That doctor being Doctor Rolletto or Rolento, I'm ^{not} exactly sure how his name is spelt because when I rang the Royal North Shore medical records, they could not tell me the exact spelling of the doctor's name although there is a record of me visiting a doctor on that day with that name.

The doctor told my grandmother it would not be necessary for her to accompany me and that I would be fine on my own. As soon as the door closed the doctor asked what the problem was, and I told him I had hurt my back in the lower area being the coccyx bone, and I was in much pain. He then told me to get up onto the bed and take my pants and my underpants off. I asked him why and he said

because I want to check if you are bleeding internally. I was half lying down on my side facing the doctor. He then put his finger up my anus and moved it around. Then he said I also have to check whether or not you have blood in your semen. He then masturbated me until I ejaculated. After that he then said you're fine, there's no blood, you're free to go. My grandmother met me in Casualty room and we left the hospital.

This event has mentally, sexually, and emotionally scarred me. It has only been this year that I have finally faced this problem. I have told my family and I am also now seeing a psychologist to help me get over it.

Could you please assist me as I wish to lodge a complaint against this doctor.

Yours Sincerely

AWC
