Ref

LH

b. RE 76
DA

This child was seen on the 18th October 1991 between 1155 and 1230. I understood from Peter Mulhearn that there had been allegations that LH had been interfered with, with mutual oral sex and masturbation by an adult volunteer at St. Anne's school. I understood that there had been interviews by the Police. I understood that LH had a blood test for venereal disease which I presumed which HIV and/or Hepatitis B. I did not go back into this allegation but took a brief history from his foster father NF. I understood that LH health was generally very good, although he did have an upper respiratory tract infection. He has recently competed very successfully in the Handicapped Olympics in Victoria.

I examined him without his foster father but in the presence of REDACTED. He was a tall adolescent who appeared to have some disability, but was able to answer simple questions. His height was REDACTED weight REDACTED and head circumference REDACTED. His blood pressure was REDACTED. He had mild strabismus particularly in the right eye. His eardrums were not seen because of the angle of the canal. His head and face otherwise appeared normal. His chest appeared normal. He was never fully undressed. His abdomen was examined with him on the examination couch and appeared normal. His genitalia were mature uncircumcised male with no signs of trauma and no signs of discharge. His anus examined with him in the left lateral position was normal with no signs of trauma or previous injury. I did not use a colposcope or take photographs.

My conclusion was there was no physical evidence for possible interference. I took a throat swab for culture particularly gonococcus I suggested that I see him in a month to take a repeat blood for VDRL, HIV and Hepatitis B.

He was having repeated nosebleeds and had a belt of inflamed Littles area with some bleeding on the right. I suggested that he use Kenacomb ointment three times a day to his nose for a week. The foster father was to discuss this with the Local Medical Officer when he saw him in the next day or so.
