MEDICAL REPORT

DATED 20.8.10

CDI

DOB: REDACTED 2004

CPS 9305.1 / 828213.7

The examination was performed in the Child Protection Service (CPS) of the Flinders Medical Centre by Dr Patrina Lee, in the presence of Ms Olivia Kay, CPS Senior Social Worker on Friday 20.8.10 at 1730 hours.

CDI had been referred by Detective Dean Millman from South Coast CIB for an urgent medical assessment following allegations of digital/anal penetration and penile touching (alleged perpetrator touching CDI's penis and vice versa) by the school bus driver, CDF.

It was reported in the Families SA notification that "today, CDI was crying late in the morning. He was asked if something was hurting and he pointed to his stomach, then his penis and bottom. CDI went on to say to informant that CDF pulled his own pants down and showed CDI his penis and asked him to touch it. He also said that CDF asked CDI to pull his own pants down and show CDF his penis". It was also recorded that "CDI has complained to the informant that his bottom has been sore".

Prior to the medical examination, an interview was held with CDI's parents, CDH and CDG for the purpose of gathering a relevant medical history.

CDG reported that CDI had been complaining that "my bum is sore" and "bum hurts" since the beginning of Term 3 ie for the last five to six weeks. CDG stated that there had been no anal bleeding. She reported that CDI had also developed some "skiddies" - faecal soiling. Both CDG and CDH stated that they initially thought CDI's complaints were due to bony coccyx pain and considered whether he may have hurt himself, although neither of them had witnessed any specific injury event. CDG reported that CDI started bed-wetting several weeks ago. She also stated that recently, CDI's behaviour had changed significantly and that he had become very aggressive and emotional.

CDG reported that CDI has global developmental delays and although he speaks in sentences, his speech is

difficult to understand.

Examination findings

CDI [redacted] was examined in the knee-chest position with a colposcope. On examination, CDI [redacted] was pre-pubertal. The genitalia and anus were normal. CDI [redacted]'s lower spine was normal to palpation.

Forensic opinion

CDI [redacted]'s anogenital findings were normal. Genital touching and digital penetration of the anus can occur without necessarily causing injuries to the anogenital tissues.

Further assessments of CDI [redacted]'s allegations by the Police are clearly warranted.
