

Scouts Australia Cancelled Membership List

Data Sharing Proposal

Although the recorded data on individuals whose memberships have been cancelled will be relatively simple (full name, date of birth, Branch), there are some technical challenges involved in creating a shared file that has the appropriate usability and security.

Proposed data fields for a person listing in the database should appear something like this:

Surname	Given Names	Date of Birth	Date of Cancellation	Branch
REDACTED	REDACTED	REDACTED/1964	23/09/2001	SA Branch

The database will be held on a nationally available platform (existing now). Existing user access functionality is already built in via login and the appropriate security can be set up at that point to allow for access. Each Branch should check with the National Office for log in details.

Additional features of the database include:

- a name search function
- the ability for concurrent online user access
- users to add new listings at any time
- tracking (including date and time) to log who has accessed and created new listings
